

VERSIMAT DEPLOYMENT

MYCELX instantly binds oil and sheen to the VERSIMAT surface preventing the contamination from separating, emulsifying, and releasing back into the environment

MYCELX VERSIMAT was deployed at the Trans Alta Lake Wabamun and Sundance power plants' water-intake canals. Due to a train derailment near the lake, 763,000 litres of oil flowed into Lake Wabamun. The VERSIMAT removed oil and sheen at the intake canal and protected the plants' RO membranes from failure.

MYCELX VERSIMAT location

A complete line of MYCELX infused response products is available for both sheen and or oil removal for both still or flowing water.
